

With our core belief that 'light is a material', we thrive from taking wild ideas and creating beautiful, thoughtful and innovative products.

Founded by Steve Jones and Russell Cameron in London in 1999, we continue to work with exciting designers from all over the world to craft a contemporary lighting collection of the absolute highest quality. With an instinctive desire to rebel from the norm, we utilise materials and processes in unique ways to defy expectation.

Innermost products speak of craftsmanship as we design everything with longevity in mind. We are as 'British as London itself': an incongruous mixture of classic English tradition and vibrant global diversity.

Large and Luxury

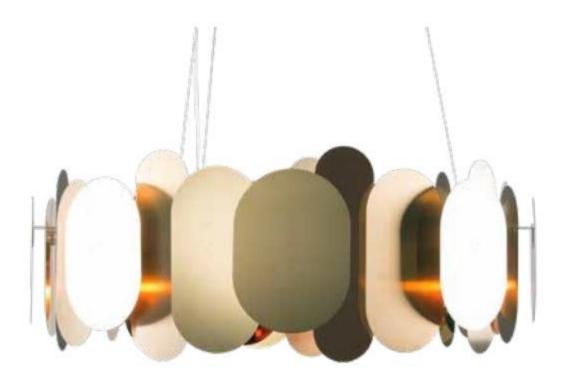

The Large & Luxury collection is a wonderful mix of technology and vibrant new aesthetics, where we really go all out to wow. Crafting the highest quality materials, hand-blown glass and striking metallics into contemporary lighting forms. This range speaks of craftsmanship and innovation; an ideal centrepiece for the luxury interior.

Combining innovative design with sublime finishes, these unique chandeliers and pendants create stunning and practical installations. Having graced the interiors of 5 star hotels, top restaurants and famous casinos, these pieces of scale add glamour to any space.

Panel

By Steve Jones

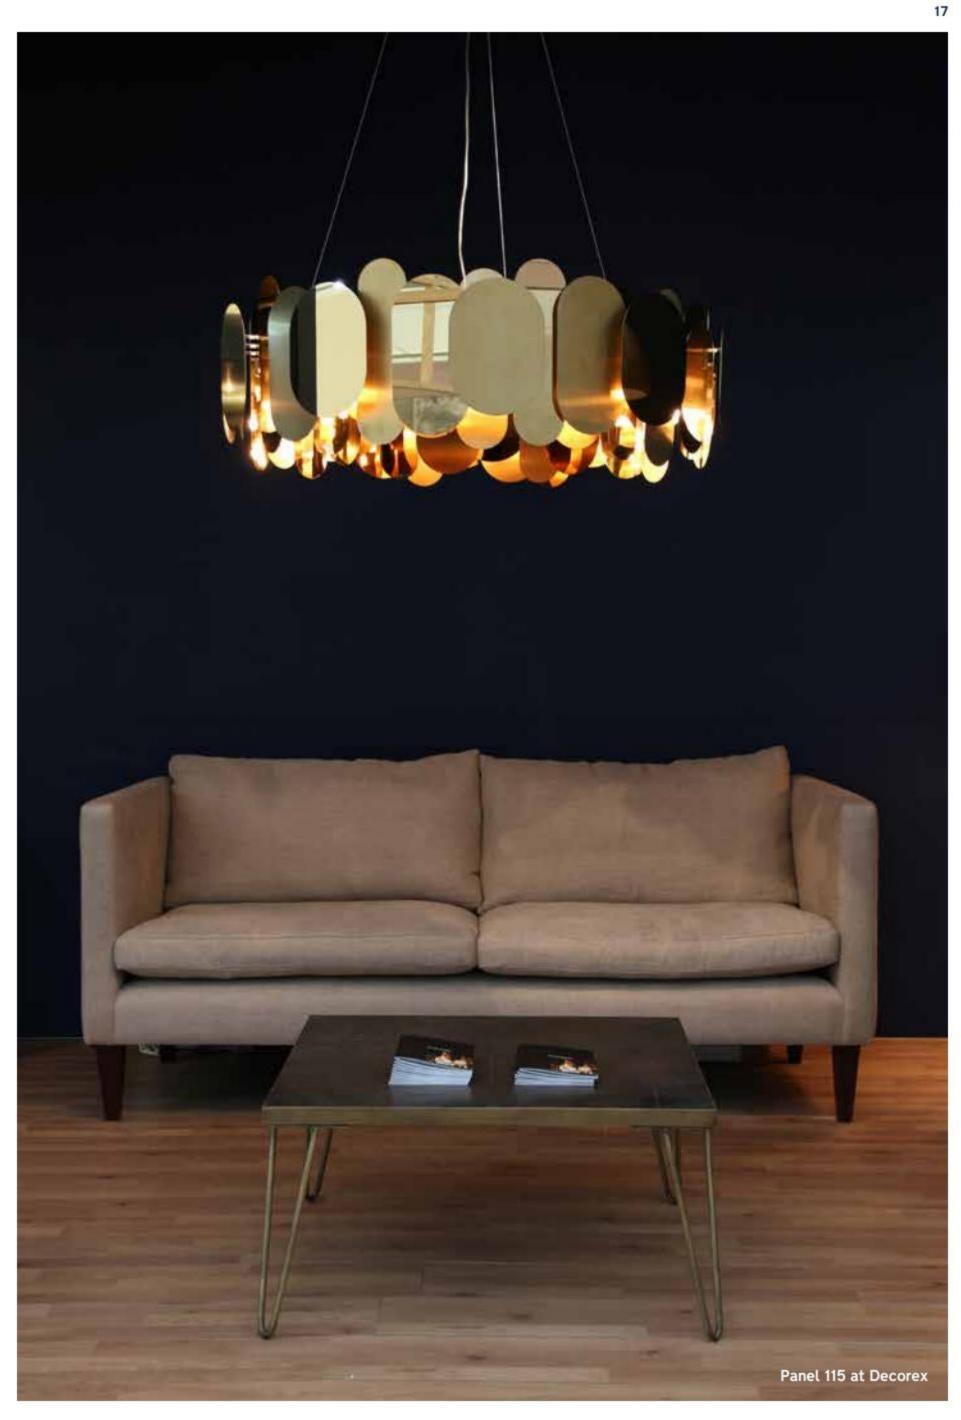

Panel came from experimentation with materials and forms that allowed a mix of finishes. The use of both polished and matt surfaces were inspired by contemporary jewellery as well as architectural metal cladding. Steve Jones layers a mix of finishes and forms to create this exciting chandelier with a contemporary feel.

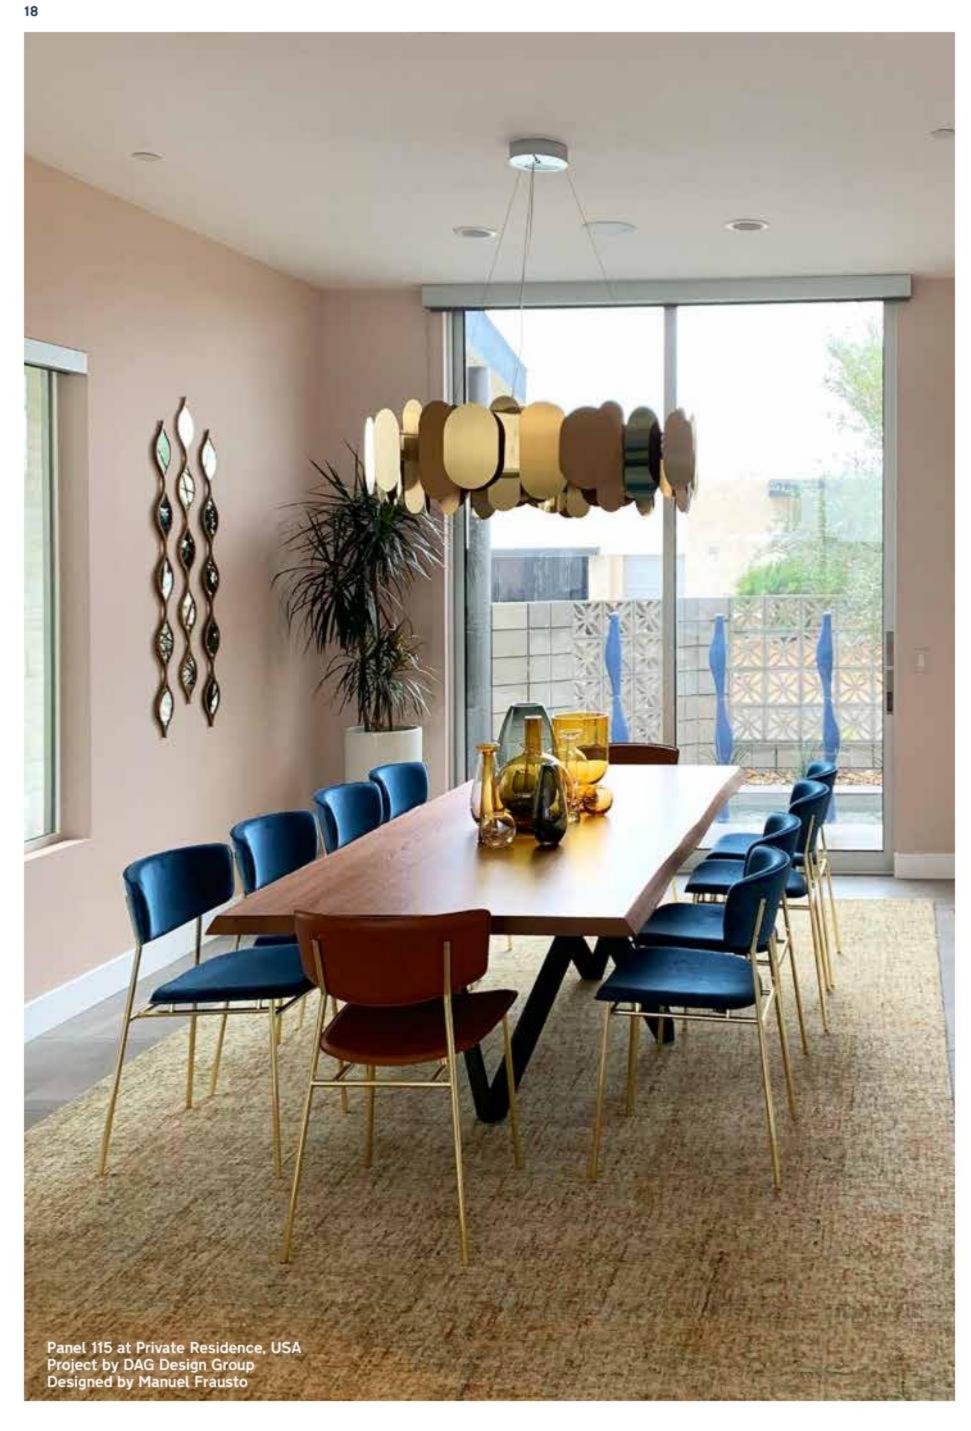

Panel reflects different sections of the interior it is placed in.

A statement piece that is available in a wide range of finishes and colours.

Beads

By Winnie Lui

Bringing together the best detailing and finishing from Winnie Lui's jewellery craft and combining it with the engineering and technology of modern lighting design. The results are these striking forms which when lit provide an array of infinite reflections, as if the interior was inlaid with jewels.

The smaller size, Penta, is equal in all dimensions and well suited to smaller narrower spaces. The wider Octo is perfect for large spaces, dining areas, lounges and where maximum impact is needed. Mixing the two shapes together in an installation creates a beautiful effect.

Beads produces an infinite amount of reflections

Material Stainless steel, polycarbonate
Colour Copper / Chrome / Gunmetal

Lightsource UK/EU E27 Max 15W LED, USA Max 15W LED (not included)

Recommended Bulb Beads works with a variety of different LED bulbs.

LED globe bulbs 500 – 800 lumen output and from 2700K – 3000K colour temperature. These styles are particularly effective in the white colour and in the metallic options for a softer less reflective look.

LED filament style bulbs will bring out the reflective qualities of the metallic finishes brilliantly. Best performance would be from 600-900 lumen output with 2200K – 2700K colour temperature

Ceiling Rose Hemisphere. Colour matches the product

Facet

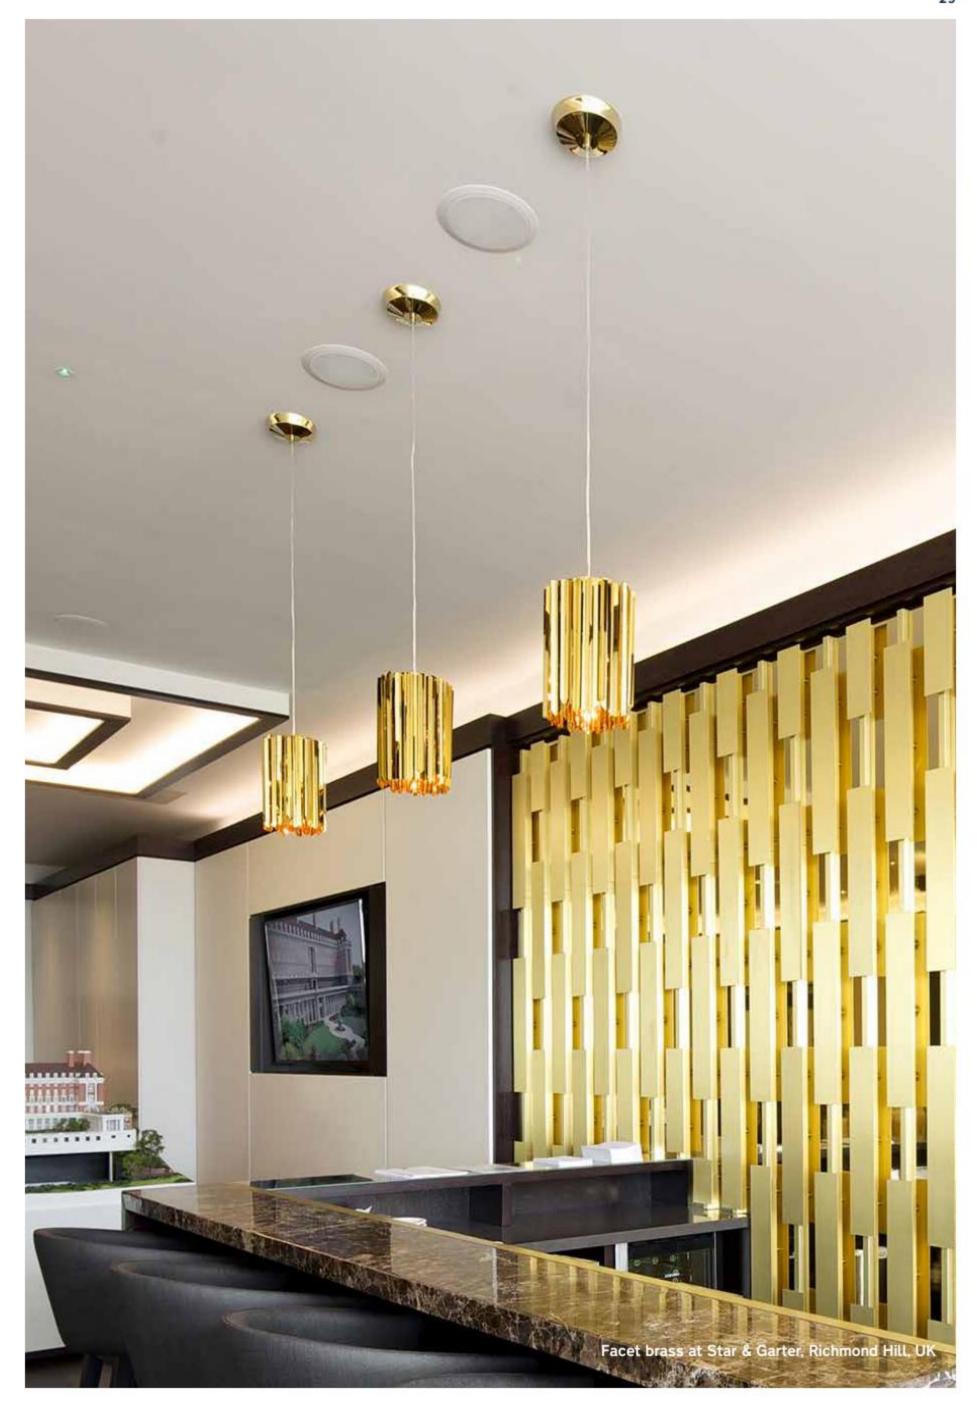

By Tom Kirk

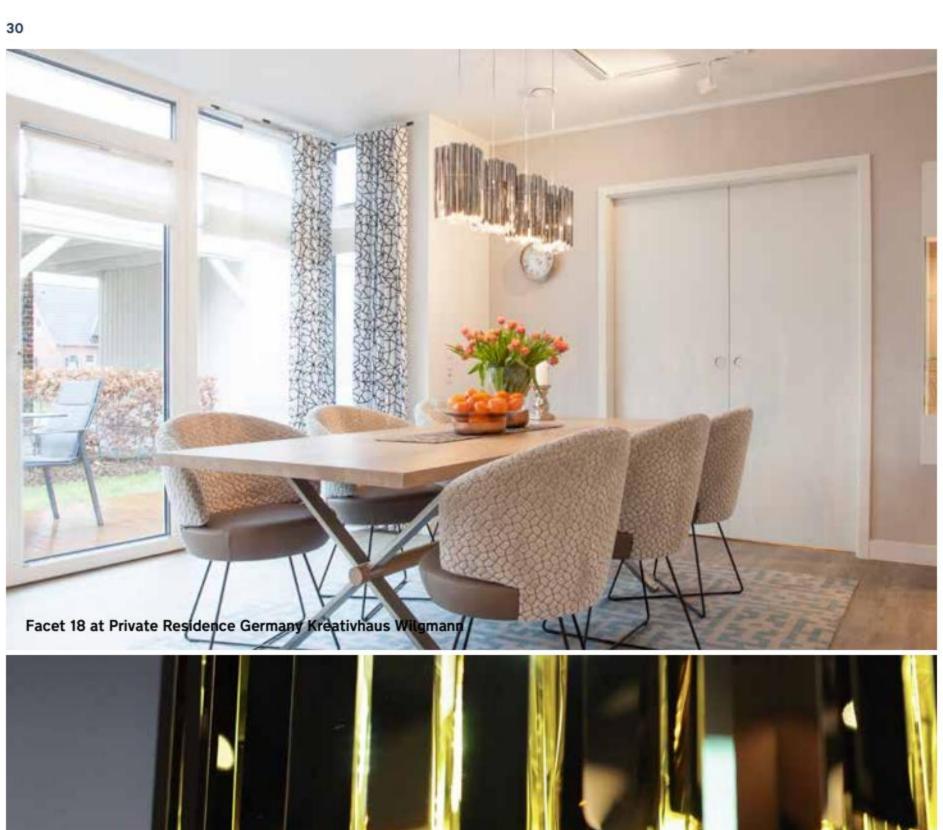

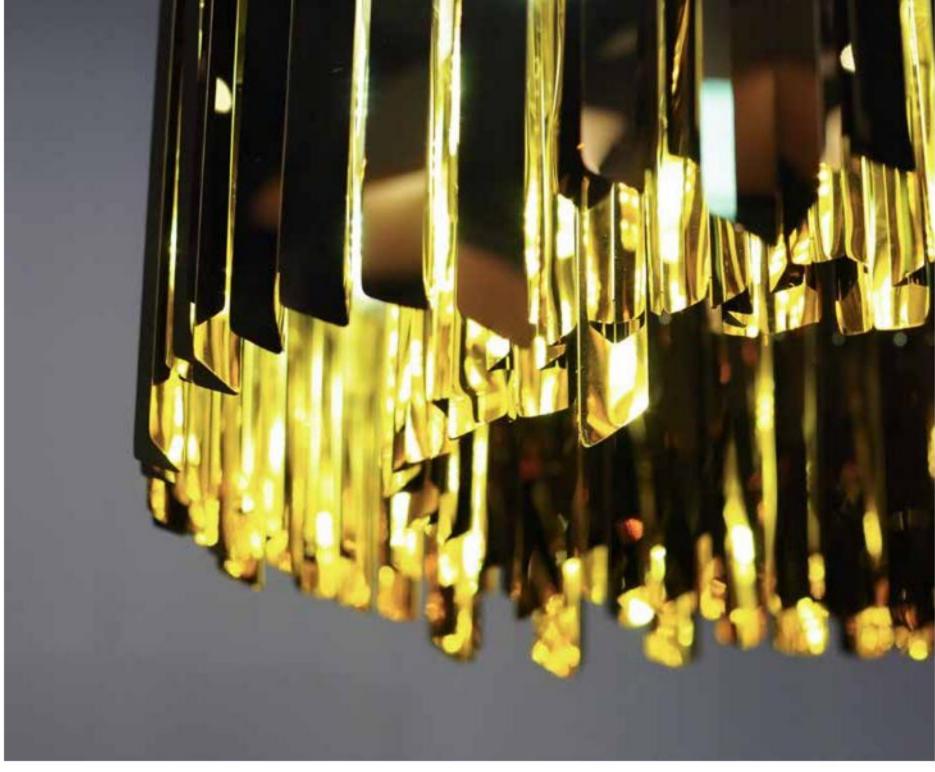

This highly polished stainless steel chandelier & pendant light brings an infinite amount of reflections to any interior. Hundreds of etched and folded strips arrayed around its circumference create a surface of small facets, each presenting part of a fragmented image of the interior space.

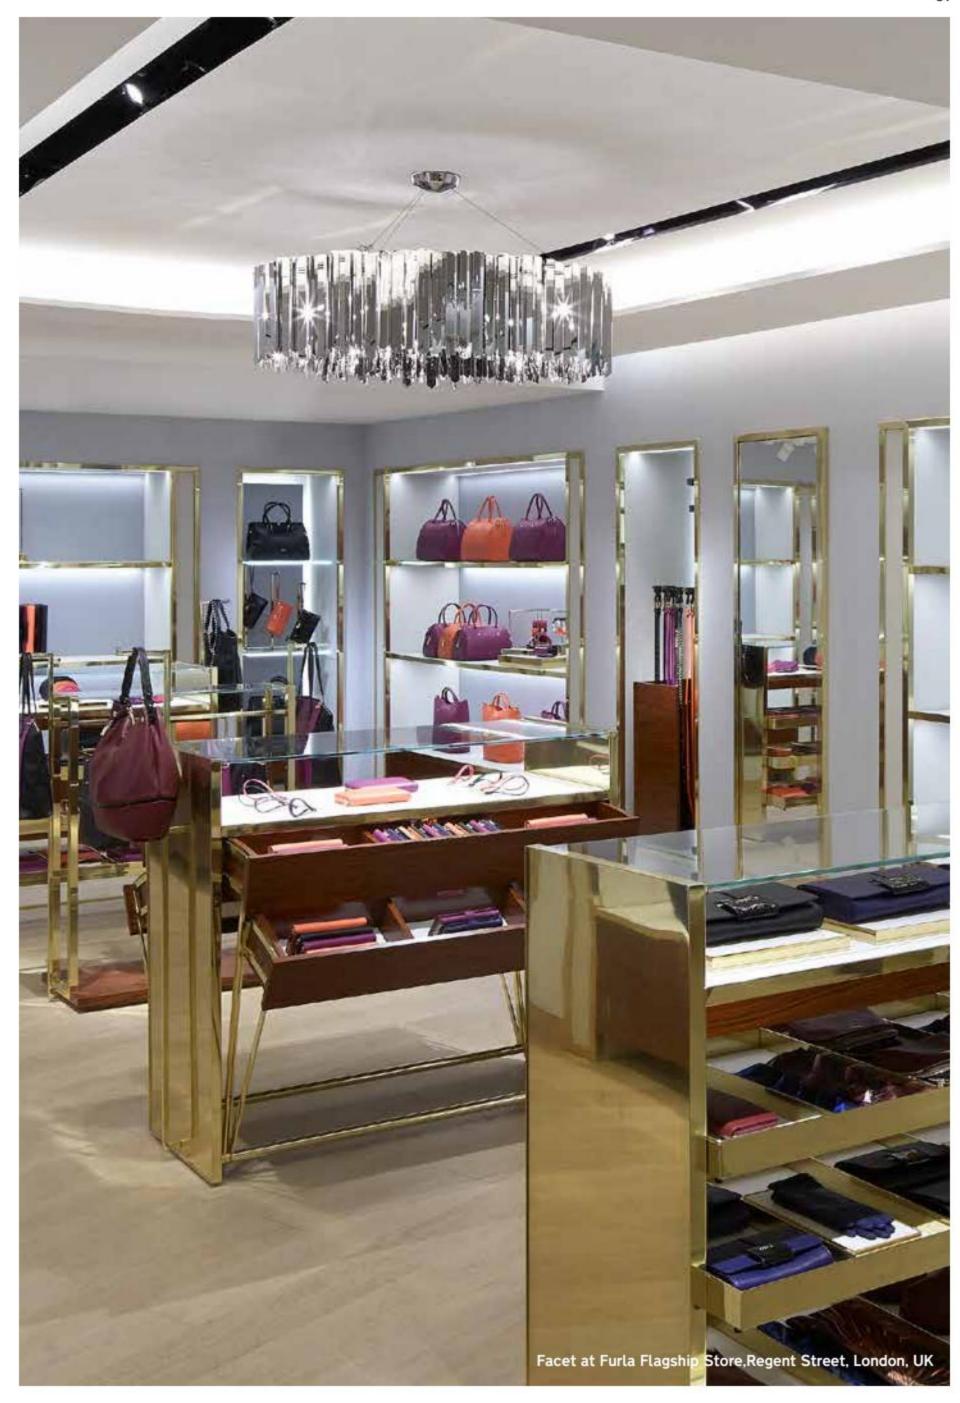

The effect often fools the eye into thinking you are looking at glass or crystal until you get closer and realise it is perfectly polished metal. Facet has graced numerous interiors worldwide, as a unique and stunning centrepiece.

Brixton Spot

By James Bartlett

Brixton is a spot pendant inspired by the Victorian railway and residential architecture of south London. Designer James Bartlett took the octagonal turrets that appear on buildings in the area as the starting point for this design, which has a strong engineered aesthetic.

The spot pendants are extremely flexible for a range of installation options, with a solid, industrial feel.

Brixton Spot Cluster

By James Bartlett

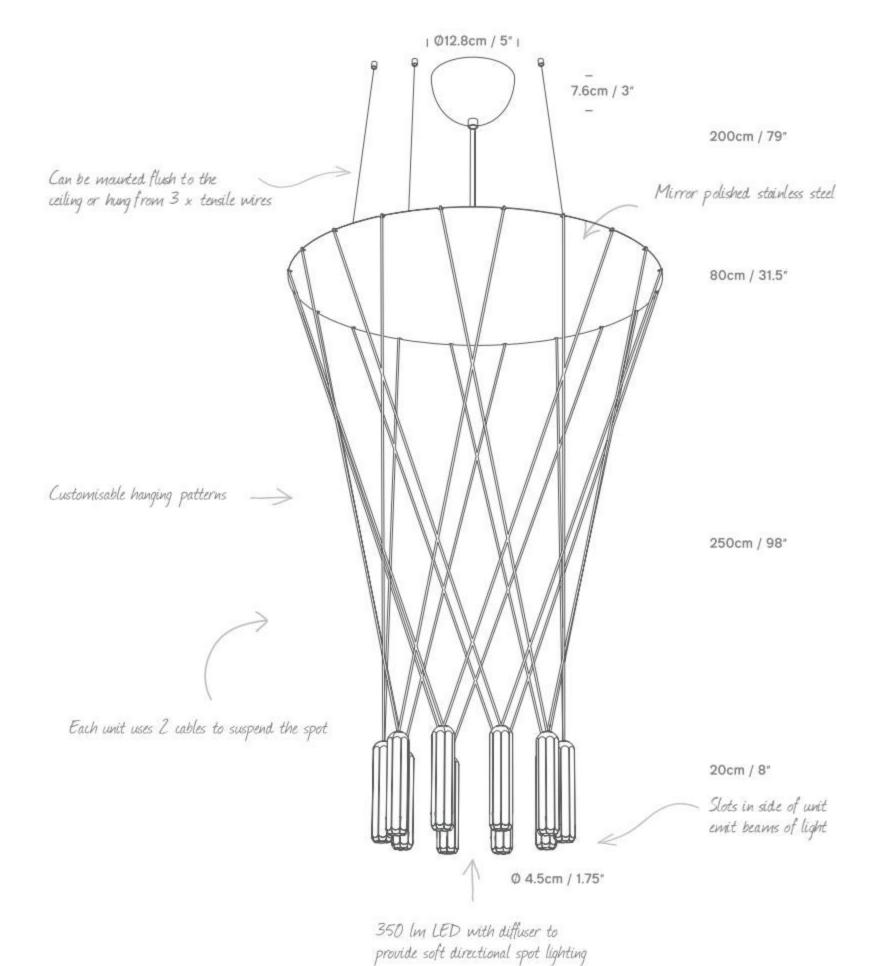

In the Spot Cluster, Brixton pendants are suspended around a circular disk. The clusters can be arranged in various patterns to give different design options. Arranged as a down-lit cluster chandelier, the cords themselves criss-cross to create decorative geometric patterns.

Brixton Cluster can be installed with many different configuration options depending on the installation.

Membrane

By Jette Scheib

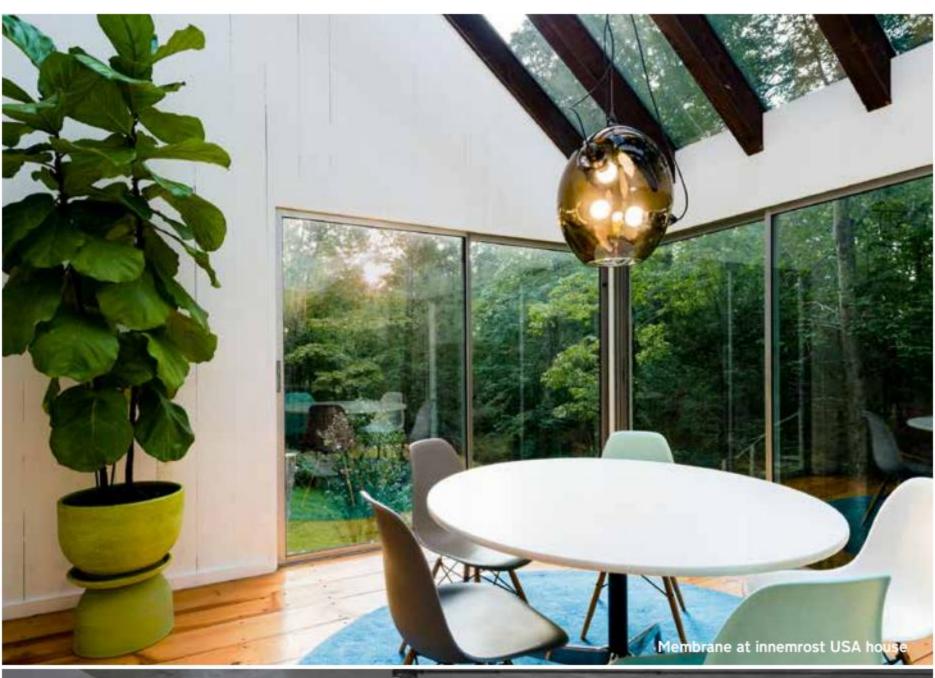

Membrane's smoky hand-blown glass body seems to cool and harden at the precise moment bulb and shade become one, forever encapsulating the light sources. Strikingly beautiful, the translucent glass has been seemingly pierced by light bulbs, leaving only the fittings and cable exposed.

The skills of the Czech Glass craftsmen are immediately evident in this beautiful piece. It takes 4 men several hours to form each piece; hot heavy work that requires the most skilled craftsmen. Polished gunmetal fittings result in a sophisticated design well.

Buckle

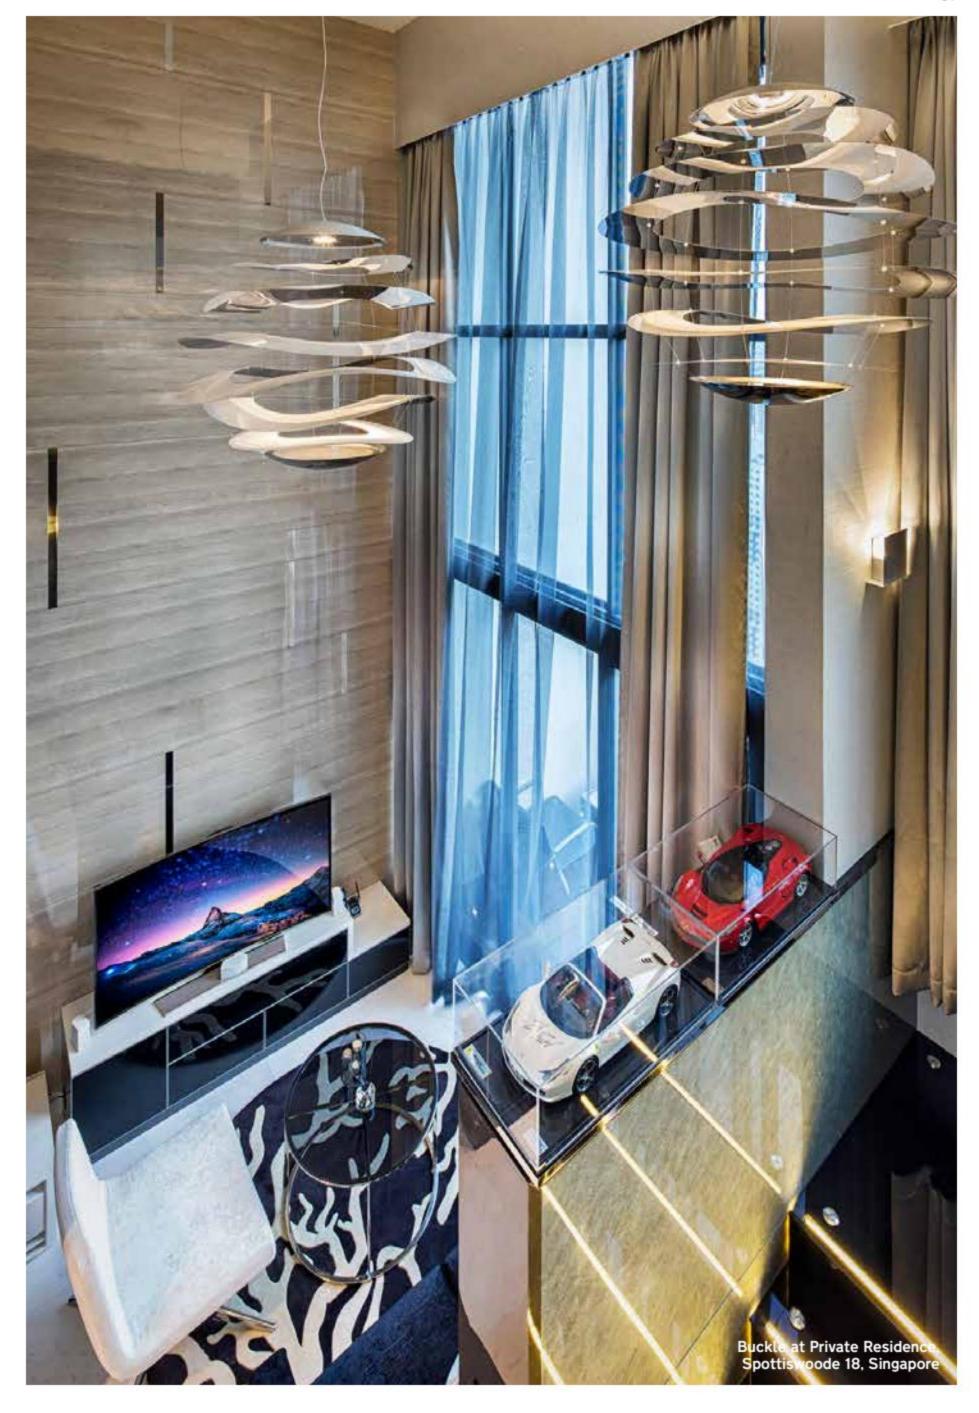

By Tina Leung

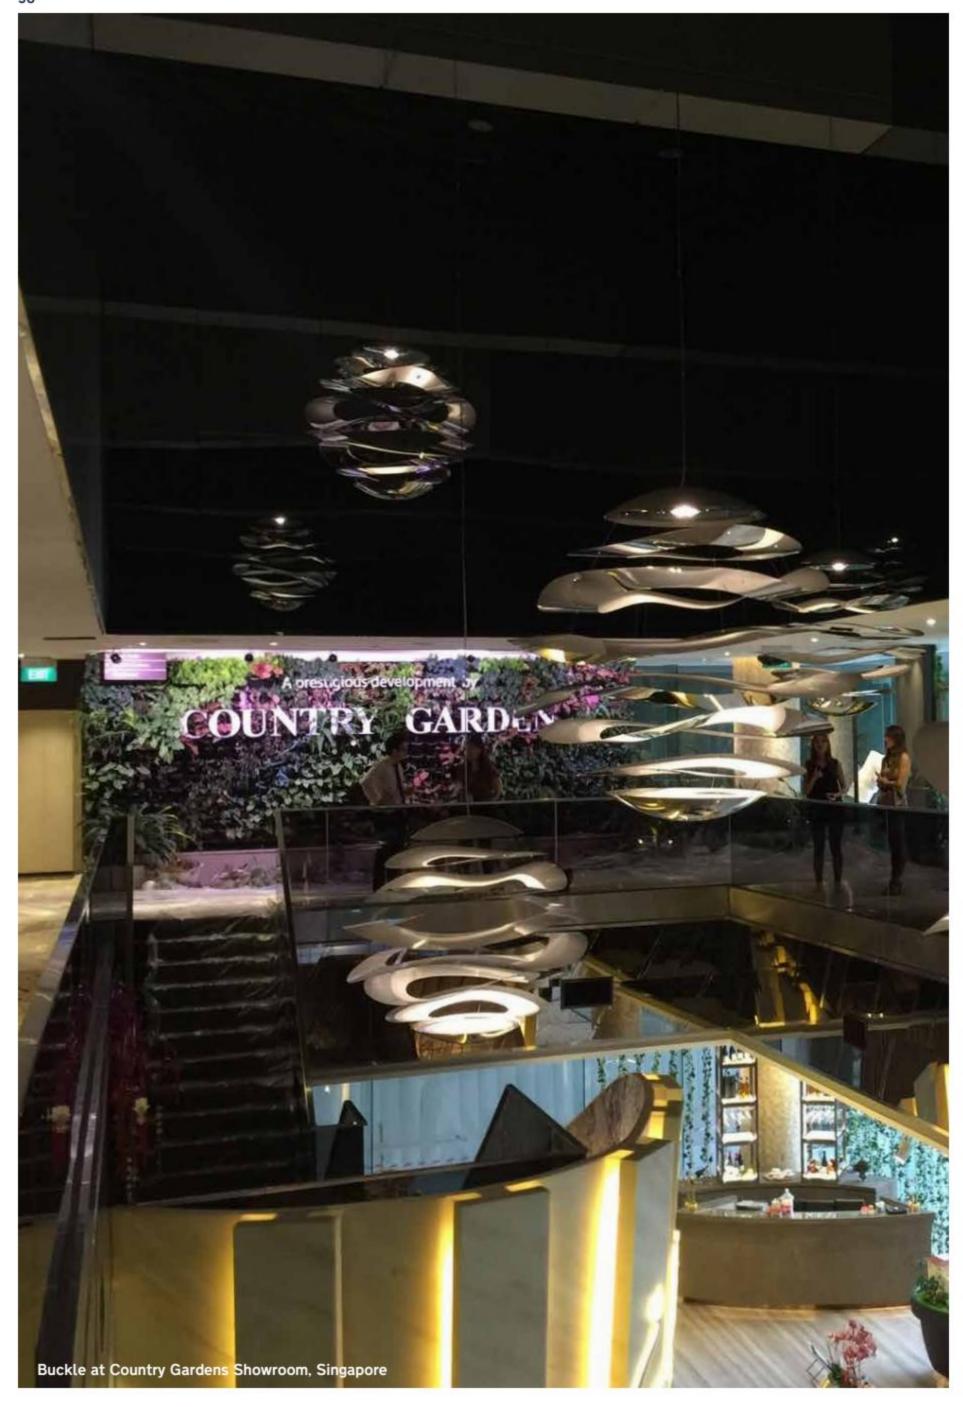

Buckle is a stainless steel pendant light and ambient lighting sculpture. It illuminates by bouncing light off its own internal surfaces and provides wonderful background light. Available in two sizes, it is neither a classic up or down-lighter but produces a unique effect all of its own, casting interesting shadows and reflections. The feeling it creates has often been likened to light bouncing off water and gives a dramatic contrast in interesting spaces.

The scale of the product makes it well suited to high atrium spaces and the low power LED unit makes it low maintenance.

Doric

By James Bartlett

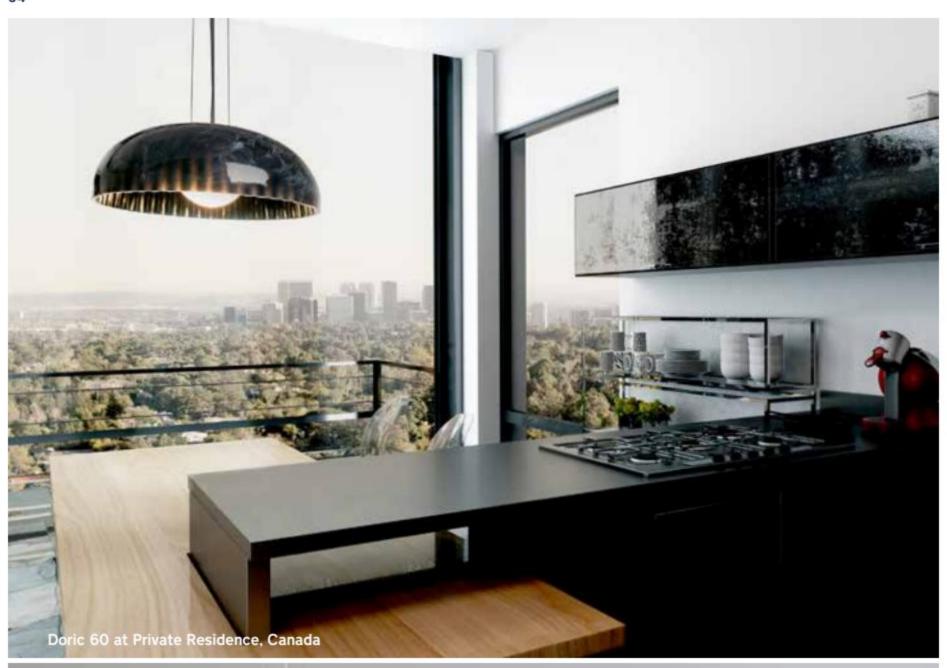

James Bartlett was inspired by the forms of ancient columns and pillars, particularly those of the ancient Greek order of architecture: Doric. The traditional forms have been subverted so that the classical scalloped details of the structure instead encircle the interior of the shade. This detail can therefore only be seen from certain angles, particularly beautiful when viewed from below, revealing a form that is not unlike the crimped edge of a seashell.

The beautiful marbled material is actually produced from a resin, giving the appearance of a heavy, solid form, that is in fact lightweight and translucent, allowing for a great variety of sizes and finishes. An elegant smooth marble-look is complimented by quality fittings, to give a contemporary and stylish finish.

Matrioshka

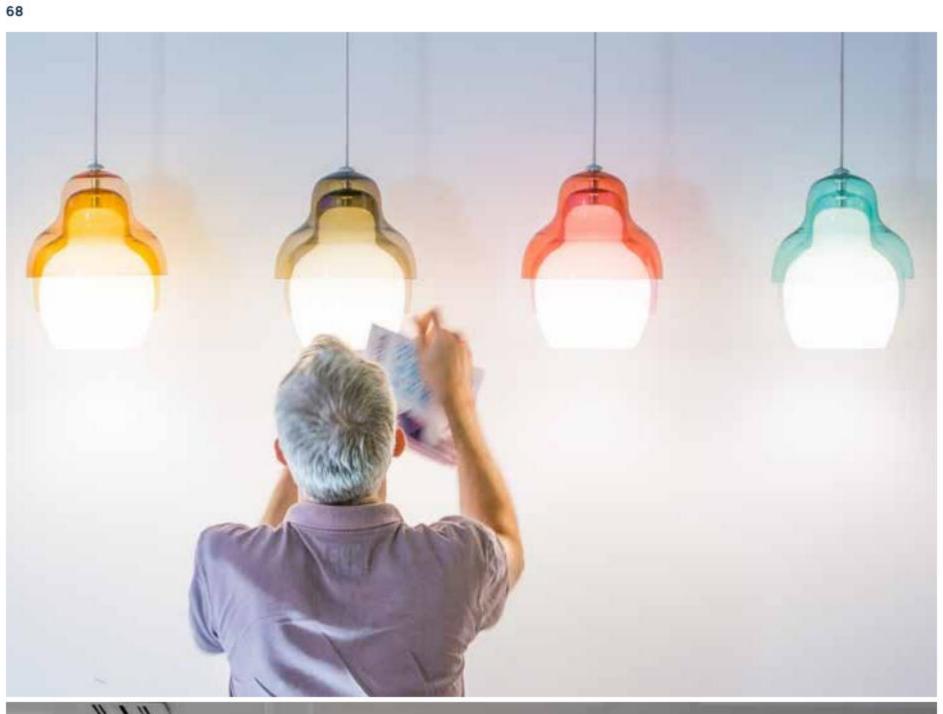

By Stone Designs

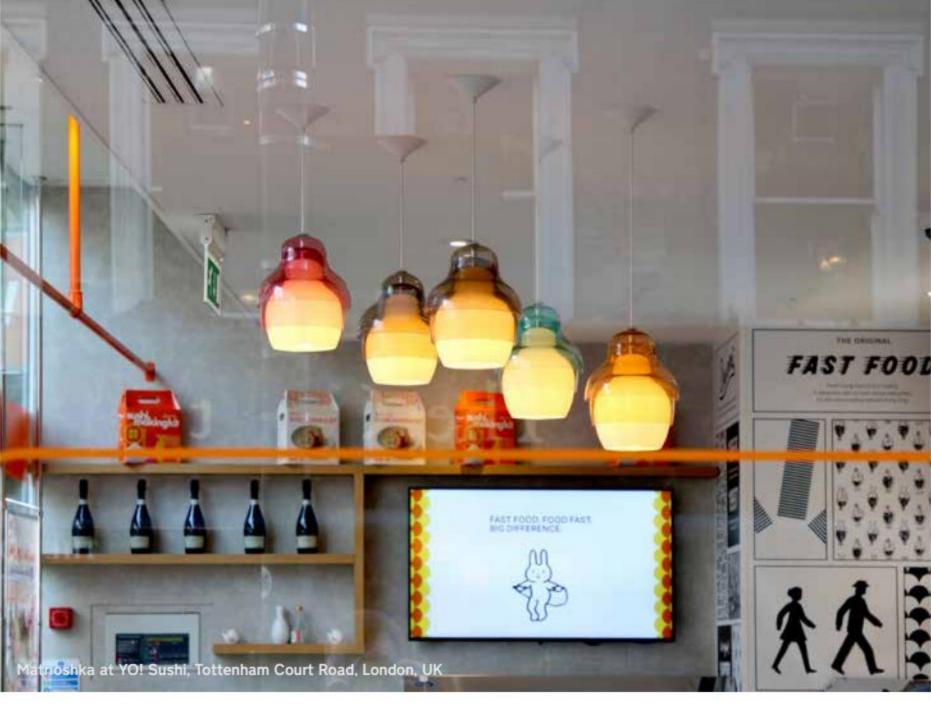

Cast from resin, the individual pieces that make up Stupa are joined and hand finished individually on a lathe, then polished with beeswax. The sharply defined ridges around the design allow different amounts of light through and add to the visual impact of the piece.

The wonderfully unique lighting is made by combining a mass-production process with highly skilled craftsmanship. The result is a lamp that permeates an ambient glowing warmth while still providing a practical light level.

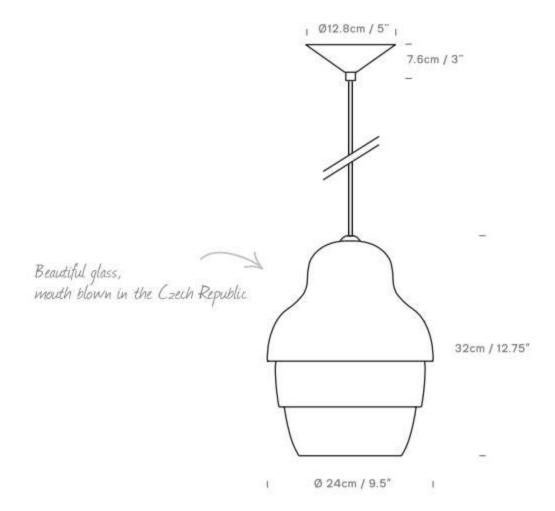

The form was inspired by temple architecture in Asia, particularly the stupas of Myanmar. Winner of Good Design Award 2015.

Lateralis at Morgan Furniture Showroom, London, UK

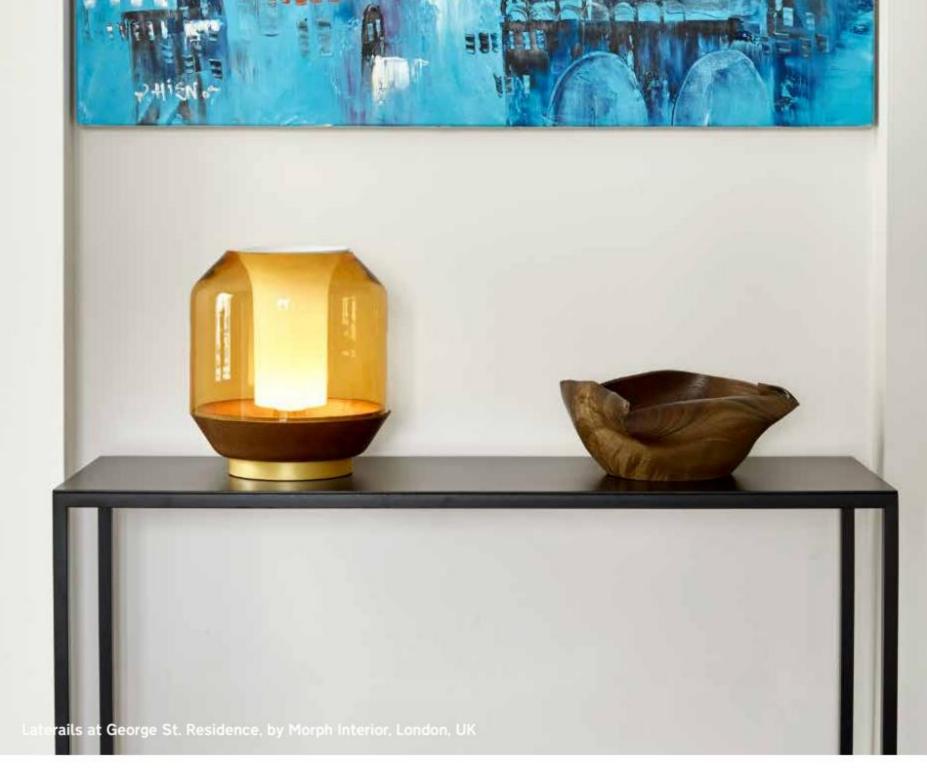

Lateralis

By Ben McCarthy

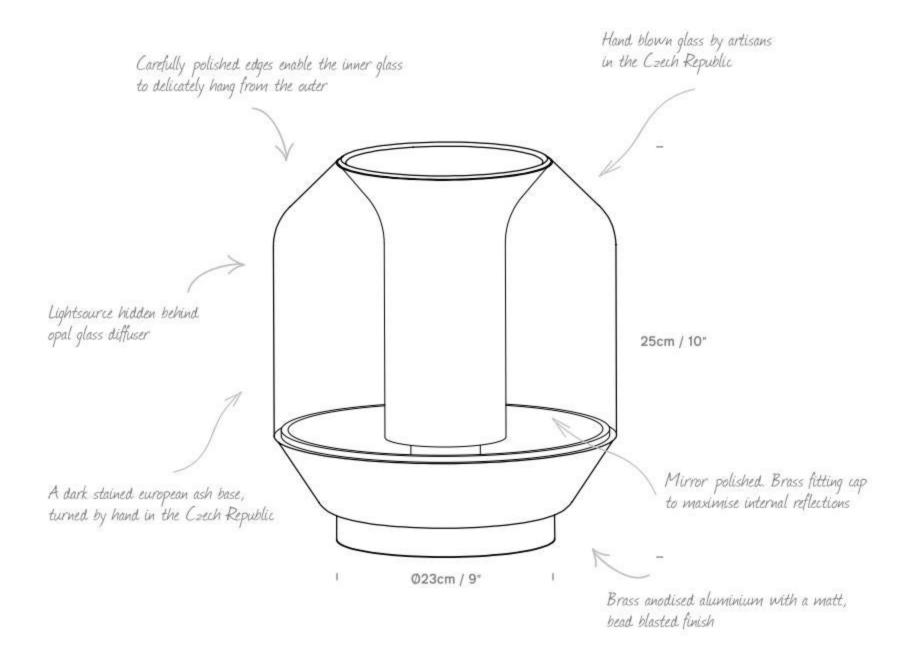

Mouth blown glass, turned wood and brass-finish components mix together with a well defined palette in this table lamp. Crafted glass seems to pour upwards and outwards following the breath of the glass blowing artist, producing a honey-coloured dome with a similar syrupy consistency. At the heart of the table light, dark ripples of wood reflect off polished brass.

Joseph

By Michael Young for EOQ

The soft Asian silhouette of the Joseph collection belies the reassuring strength of an object crafted from a solid block of aluminium. Each piece is extruded into shape, softened with CNC cutting before being milled on a lathe to open up the core and allow the light to diffuse through the fins.

Joseph Pendant Small

Recommended Bulb Filament or Pearl LED Globe Bulbs with 300 - 500 Lumen output and 2800 Kelvin

Ceiling Rose Black Cable. 38cm to switch, 150cm to plug.

Cable Inline foot

DubBy Michael Young for EOQ

Starting with the same raw extrusion they have sculpted much softer forms by removing a lot more aluminium material. This allowed them to encase the resultant space in beautiful hand blown glass from the Czech Republic. The Glass shades are packed separately enabling you to create your own colour combinations of glass and aluminium.

Dub Pendant Small

Radiate

By Innermost

Radiate is a range of ceiling roses that allow a variety of configurations for pendant light clusters.

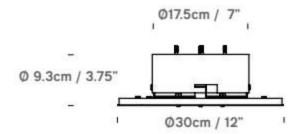

Radiate 30 suits smaller circular configurations, with Radiate 60 available for multiple pendants or clusters of larger pendants. Radiate Linear can be used for a consecutive line of fittings – perfect for over a countertop or rectangular table.

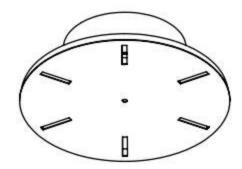

Using Radiate can enable an easy installation of up to 8 pendant lights with only 1 fixture and connection. It also provides a neat aesthetic, eliminating the needs for multiple ceiling roses.

Radiate is compatible with all Innermost pendant lights and can be used with other fixtures.

Radiate Circular 30

Material Steel
Colour White
Maximum load that can be suspended 10kg

Designers

Ben McCarthy

Born and raised in Sydney, Ben graduated in Industrial Design from UNSW in 2003. A year later, the British Council facilitated his move to the UK where he worked in the Tom Dixon studio. In 2007 he relocated to Hong Kong where he is still based, working in the office of Michael Young. Over the years Ben's designs have attracted several awards and grants; the Australian Council, British Council, a solo show at the Object Gallery in Sydney, and exhibitions in Tokyo, Milan, Hong Kong, London, and more.

Jette Scheib

Jette Scheib studied industrial design at the University of the Arts, Berlin (UdK), and has worked since 2005 as an independent product designer specializing in homeaccessories. Her work can be plain and pure, or narrative and playful, but often with a little twist that adds a new context or dimension to a functional object. Inspiration is everywhere: whether it is art, music, people and their stories, habits, clichés or simply life itself that feeds.

James Bartlett

James Bartlett studied at Manchester Metropolitan and joined Innermost's London studio in 2008, later taking the position of Design Manager. His design is characterised by an interest in material and process and he enjoys being in the workshop to participate in every stage of production. Portland is a great example of this: what began as a project to experiment with a cast concrete process developed into the unique product available in both concrete and plaster. Deliberately coarse and bubbly concrete holding a strong contrast against flawlessly smooth plaster surface.

Michael Young for EOQ

The initial EOQ collections were made under the design direction of Michael Young, one of the generation's most influential British designers.

Rooted in a spirit of enquiry and industrial adventure, they use classic design principles with a new and constantly evolving vocabulary, delivering perfectly engineered pieces with sublime, sleek finishes. From extruded aluminium to hand blown glass, each design is crafted with precision engineering; quality that is evident when admired up-close.

Steve Jones

After studying Industrial Design at Newcastle Polytechnic, Steve Jones started his career in design consultancy. His highly diverse design experience included ladies shoes, books, toys and even naval architecture. Later he worked extensively in the furniture industry, before moving into lighting and forming Innermost with Russell Cameron in 1999.

His varied interest in design is reflected in the diverse aesthetic of the Innermost collections. As well as his own designs, Jones has brought in names like Michael Young, Jarrod Lim, Corinna Warm, Stone Designs and Shin Azumi, helping to shape a range that has breadth as well as depth.

Stone Designs

Designers Cutu Mazuelos and Eva Prego established Stone Design Concepts Inc. in 1995 to tell a story from their perspectives and without censorship. Having never worked for anyone else, lessons were learned and skills were mastered through personal hardship and sacrifice. Starting with interior designs, stands and displays, they worked with such names as Lexus, Telepizza, Havaianas, and Coca Cola. They also designed furniture for brands such as Muji Japan. Stone Designs is the constant search for new languages, a passion and reason for living.

Tina Leung

Originally from Hong Kong, Tina Leung studied at Central Saint Martins in London, England, before returning to her roots to work for Innermost. Her portfolio includes working for Shanghai Tang designing accessories and Alan Chan Design in Hong Kong. Tina's work is influenced strongly by modern Asian animation and illustration styles and in her own words she 'plays with materials to create opportunities'. Tina joined Innermost in 2004 and her first products, including 'Kapow', were launched in February 2005.

Tom Kirk

Born in Manchester in 1972, Tom Kirk studied at Middlesex University and Camberwell School of Art, graduating with a first class honours degree in Silversmithing and Metalwork in 1994. In 1997, Tom was awarded a Crafts Council setting up grant and formally established his studio, designing and producing one-off and batch produced lights. Several of these early designs are still in production today. Today, Kirk's designs reflect over a decade's experience in manufacturing processes; working with a diverse range of techniques and materials.

Winnie Lui

Winnie Lui graduated from Central Saint Martins in Fashion Communication and Promotion. At once a fashion stylist, photographer and custom jewellery designer. Lui has been a stylist for singer/actress Gigi Leung, worked for photographer Wing Shya in Hong Kong, while attaining the knowledge of silversmithing from London-based jewellery designer Lara Bohinc. Inspired by her surroundings, obsessed with both new and vintage toys, she is attracted to small details and everyday objects that are beautiful but seem unimportant. Lui's exclusive collaboration with Innermost has produced exciting creations, where fashion meets product design.

Innermost & the industry

Manufacture

We are passionate about each design and every level of detail that goes into its manifestation. We have always placed production where the best skills can be found for the material or process. We travel across the globe sourcing the best quality materials and the most suitable producers for each product and every component. Whether we are prototyping in Hong Kong, using hand-blown glass by artisans in the Czech Republic, or doing bespoke engineering at our factory in the UK, we stay close to the manufacturing development at every level.

Bespoke design & OEM

After 19 years, we continue to produce many of our lights and lampshades in the UK, at our facility in Telford, with ownership over everything from production, assembly, testing, packaging, and warehousing. This in-house management of the entire process allows us to guarantee the highest standard of quality, as well as giving us full flexibility when it comes to bespoke product.

We often use our expertise to develop and manufacture products for other high-end design houses in an OEM capacity. From licensing and manufacturing existing designs, to providing a full design consultancy, we offer a unique and tailored service and are able to produce in high volume and absolute one-offs. Please contact us if you are interested in hearing more about our design and production services.
